The `yzthesis.sty` package

Y. Zwols, Columbia University (`yzwols@gmail.com`)

June 7, 2010

1 Introduction

This package is a template for a Columbia University PhD thesis, basically capturing the style of my own PhD thesis.

2 Usage

The `yzthesis` package is used in the usual way that a package is used in LaTeX:

```
\usepackage{yzthesis}
```

There are a few options that can be specified, see Table 1. For example, for setting 1.5-spaced text and enabling hyperreferences in the PDF output, one can include the package as follows:

```
\usepackage[oneandhalfspacing,hyperref]{yzthesis}
```

3 Example

The `example.tex` file gives an example usage of the package. This file can be used as a starting point for a new PhD thesis. Notice the usage of the `\input` command in this example, which avoids having to create one very large tex file!

singlespaced	Sets the line spacing to single-spaced.
oneandhalfspaced	Sets the line spacing to one-and-a-half-spaced.
doublespaced	Sets the line spacing to double-spaced.
hyperref	(to be used with PdfLatex) Enables hyperreferences that can be read by e.g. Acrobat Reader
